

To....

Hereby, we notify you of the receipt of your mating declaration on d.d. XXXX
Your mating declaration has the number XXXXX

On the backside of this letter is the data lineage of the bitch and the male. If you think there should be a correction, please mention that to us in writing within seven days, and state the mating number. If there is a title missing, you should send us the proof of that title.

We also enclose a birth form. This form should be filled in and be back in our possession within 10 days after the litter is born.

After we receive the birth notice, we will look for the DNA of the mother on file. If there is no DNA profile known to us, you can submit that together with the pups in the litter. For more about this, you can read in the guidelines for breeding Dutch breeds abroad. (State link: <http://>). The sire's DNA must also be on file, or sent to us with the litter DNA. All DNA must be an ISAG 2006 profile.

If the bitch doesn't deliver any puppies, or when all the pups are born dead, please send the birth form with the notification 'Bitch was empty'. This to prevent mistakes with potential other litters.

Best regards and a big hug,
The CEO of the Raad van beheer op Kynologisch Gebied in Nederland

In response to your mating declaration this data lineages is captured
